## PAVER

For extra heavy duty use indoors and outdoors. Paver bricks and Paver Tiles outperform virtually any other anti-slip safety flooring materials. Unaffected by ice, water, severe temperatures, and extreme wear. Paver has an excellent reputation among specialty facilities - from golf clubs, to equine facilities to fitness centers to grocery store chains. It's unparalleled ability to withstand constant abuse and high traffic while providing a safe, slip resistant surface has made Paver a well-known, rock-solid performer. Available in two different heights and in either individual bricks or pre-formed tile sections, Paver can be either permanently adhered outdoors or loose-laid indoors to be removed and re-used as needed.
